

Problem F. Reverse the Sentence

OS Linux

Given a sentence, reverse the entire sentence word-by-word.

Note: Solve using stack or in-place swap. Do not simply scan, split and print in reverse order.

Input Format

First line of input contains T - number of test cases. Its followed by T lines, each contains a sentence S of space separated words of lowercase english alphabet. All the words are separated by a single space.

Constraints

$1 \leq T \leq 1000$

$1 \leq \text{len}(S) \leq 1000$

Output Format

For each test case, print the reversed sentence, separated by newline.

Input	Output
3 hello world a b c d data structures and algorithms	world hello d c b a algorithms and structures data

Explanation o

Self Explanatory
