

Problem J. Left View of Tree

OS Linux

Given an array of unique elements, construct a Binary Search Tree and print the left-view of the tree. Left view of a Tree is the set of nodes visible when tree is viewed from left side.

Input Format

First line of input contains T - number of test cases. Its followed by 2T lines. First line of each test case contains N - number of nodes in the BST. The next line contains N unique integers - value of the nodes.

Constraints

$$1 \leq T \leq 1000$$

$$1 \leq N \leq 1000$$

$$0 \leq \text{ar}[i] \leq 10000$$

Output Format

For each test case, print the left-view of the Binary Search Tree, separated by newline.

Input	Output
3 5 1 2 3 4 5 5 3 2 4 1 5 7 4 5 15 0 1 7 17	1 2 3 4 5 3 2 1 4 0 1 7
